

D.CORE

The revolution in home massage therapy!

Deep Core,

Made in Japan by NIN

 **KOMODER**

 Japan Relaxation Lab
NIN.

D.CORE

NIN is a Japanese company that produces and markets massage chairs in Japan and on the global market. Moreover, the Japanese Laboratory for Relaxation by NIN aims to realize the production of the perfect Japanese massage chair through the development of the DCORE product line.

● MADE IN JAPAN

Deep Core:

a unique experience

D.CORE represents the new wave of technological evolution in the world of massage chairs. It has grown to become a brand which continuously proves its outstanding qualities. The D.CORE line of the Japanese NIN company is named after the Deep Core technology it applies. This advancement was developed by Soschu Inada, an industry legend and innovator with decades of experience.

The massage chair's frame, massage mechanism, and revolutionary Deep Core joints emulate the natural hand movements of a professional masseur, thus providing a truly therapeutic massage with long-lasting effects.

The design of D.CORE massage chairs incorporates years of research based on the vast experience of professional massage therapists. Thanks to the one-of-a-kind 3D+ TrueShiatsu Action experience these exceptional products are able to massage the user's deep tissues.

Having a D.CORE massage chair in your home will be a delight, because it will amplify its beauty by combining Japanese innovation with an organic design expressed in the use of noble materials.

3D+ TrueShiatsu Action massage technique

D.CORE is built with a revolutionary internal architecture capable of applying perpendicular pressure to the muscles and acting on deep muscle groups, eliminating sensations of tension and stiffness from the body: this is the patented 3D+ TrueShiatsu Action technique available only in this range of massage chairs.

The unique D.CORE technology for deep muscle relaxation has been developed by analysing the movements of a professional therapist with a global reputation: Dr Takehiro Isawa. NIN Japan researchers measured the amplitude of his movements and the pressure applied to the muscles during therapy sessions, studied these techniques and incorporated them into D.CORE. Even the shape of the rollers was designed to be similar to human fingers.

While conventional chairs use the compression method to massage the hands and feet, which may not result in deep muscle relaxation, D.CORE chairs use a fusion of compression and TrueShiatsu to deeply massage the back, the buttocks, arms and feet, with maximum beneficial effects on your whole-body well-being.

DCore

Superior massage with **Wave Arrays**

For a truly encompassing therapeutic massage the patented Wave Arrays technology in the D.Core range is currently the only technology in the industry that incorporates massage robots into dedicated hand and foot massage mechanisms.

The Cirrus and Stratus models bring the patented Wave Arrays massage technique to the arms for a unique therapeutic massage. Cirrus also offers Wave Arrays for the calves, making it the only massage chair on the market that uses mechanical oscillating rollers for hand and foot massage in addition to the dedicated back mechanism.

An unbeatable experience that has no competition to this today!

**The Wave Arrays system
for the arms.**

Available on the Cirrus and
Stratus models.

**The Wave Arrays system
for the calves.**

Available on the Cirrus model.

10 D.CORE advantages

Deep Core Structure

The specially designed rollers are moved by joints that emulate human hand motions, which stimulate deep muscle tissues through ample movements.

Each roller has its own motor that allows for continuous and oscillating motion.

Intelligent multiple joints

2 to 7 intelligent joints emulate the capable motions of a massage therapist's hands.

Space saving function

The massage chair glides into space saver mode and out of your way at the simple press of a button.

Dedicated foot massage mechanism

Dedicated massage robots apply reflexotherapy techniques to stimulate the nerve centres.

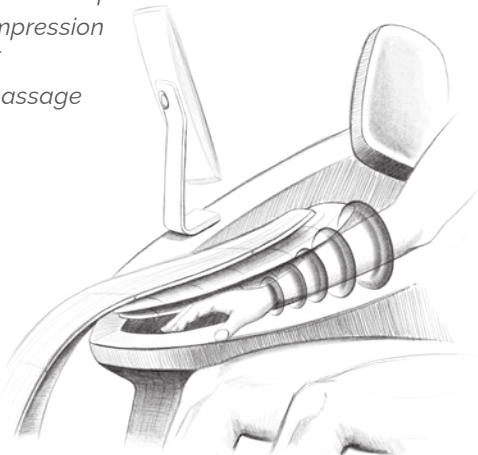

Calves massage

A dedicated massage robot uses human hand-like circular and oscillating movements for the enveloping massage of the calves.

Specially for the arms

Arms are massaged through a double action technique employing compression and the use of a dedicated massage mechanism.

Multiple motors

The simultaneous motion of 2 to 12 motors provides an intense massage experience.

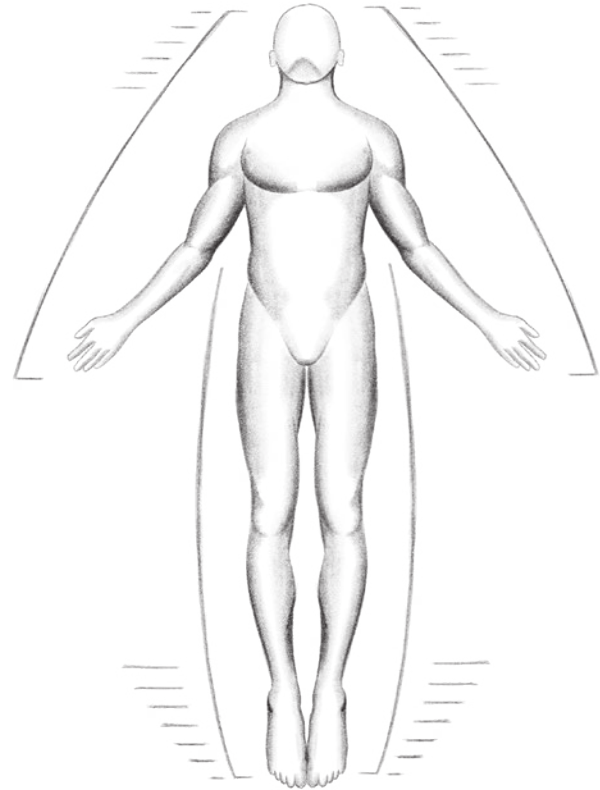

Back heating

It eliminates the sensation of cold by applying compression and heat to the area of the hips.

Intelligent body-scanning with micro-current

High precision body-scanning improves the efficacy of targeting the most important energy centres of the body

SL-shaped rail

It follows the natural curve of the body along the entire length of the back (115 cm!).

The core: **the rail system** **with extra coverage**

The "backbone" of the D.CORE massage chairs is the curved "SL" shaped rail on which the massage robot glides. With a length of 115 cm and a special shape that follows the natural lines of the body, the rail allows the massage robot to work in depth on the shoulders, back and buttocks.

The sensitive and energetically important areas of the human body are stimulated directly by D.CORE. In this way, the massage chair succeeds in improving symptoms of fatigue, pain or stiffness, stimulating circulation and restoring energy for an overall feeling of refreshment and unparalleled well-being.

12 massage techniques

Each D.CORE model comes equipped with 12 automatic massage techniques, dedicated to specific times of the day or focused on specific parts of the body that need special attention.

Naturally, the massage experience can be personalised to your own expectations. The massage chairs allow you to adjust the pressure intensity of the air cushions as well as the intensity of action of the anatomical rollers.

DC-1000

Zero Gravity

position

At the touch of a button, the D.CORE chairs slide into the Zero Gravity position: the legs are brought to the level of the back, while the weight of the body is comfortably supported by the anatomical air cushions. In this way, circulation is stimulated throughout the body, the massage experience becomes more effective and the sensation of floating is unparalleled.

Warming plus massage

for the back area

D.Core's patented heating system soothes and relaxes tense muscles, allowing the 3D+ system with True Shiatsu Action mechanism to deliver a deeper massage and a lasting therapeutic effect.

With Japanese D.Core technology the paravertebral muscles receive an exceptional therapeutic treatment, muscle contractions now have a powerful enemy and massage becomes a daily therapy for the whole body.

The D.Core Japanese armchair will become a warm nest in your home.

Organic, nature-inspired design

Elegant in its simplicity, revealing exceptional quality in every line.

D.CORE combines the sensations of luxury and pampering with a sense of enveloping warmth inspired by a deep connection with nature. Cutting-edge Japanese engineering is wrapped in an organic design, ennobled by walnut wood imported from Florida, USA.

Based on Japanese aesthetics, the D.CORE design represents a natural simplicity that, like a quality massage, allow you to escape the complexities of everyday life for an experience that relaxes body and soul alike.

D.CORE brings harmony, well-being and balance.

Designed and manufactured in Japan, delivered anywhere in Europe

D.CORE massage chairs are created by NIN Japan, an innovative company with unique patented technologies, focused on safety and continuous innovation. A strong research and development team finds the best solutions, and a rigorous testing and quality control system ensures that innovations are correctly translated into every product that leaves the D.CORE factory.

The 3D+ TrueShiatsu Action technique and the intelligent joint system of the massage hands, which replicate the real and sensitive touch of human hands, are original technologies developed by the company - in the world of Massage chairs, they represent the most innovative solutions available.

KOMODER is the sole importer of D.CORE in the European Union, so that an exquisite product is always accompanied by the exceptional service that defines us: free delivery and installation, 3-year warranty and another 5-year post-warranty service. So you can enjoy the D.CORE experience without worry, knowing that years and years from now this chair will not lose its value and quality.
